US-CL-CURRENT: 424/94.62; 435/201, 435/252.3, 435/252.33, 435/254.11, 435/320.1,  
435/325, 435/69.1, 530/350, 536/23.1, 536/23.2, 536/23.5

ABSTRACT:

A unique clone of a Polistinae venom enzyme, recombinantly produced Polistinae venom enzymes, and methods of using the recombinant enzymes are provided. In a specific example, both phospholipase and hyaluronidase cDNA from Polistes annulares contain apparent "intronic" sequences. In still a further embodiment, genetic engineering permits the construction of the "intronic" sequences to yield a useful coding sequence for expression of mature Polistinae venom enzyme proteins.

TITLE: Cloning and recombinant production of vespid venom enzymes, such as phospholipase and hyaluronidase, and immunological therapies based thereon

DATE-ISSUED: April 16, 2002

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
King; Te Piao	New York	NY		

US-CL-CURRENT: 435/198; 424/94.1, 435/252.3, 435/320.1, 530/350, 536/23.2

ABSTRACT:

The present invention is directed to nucleic acids encoding vespid venom enzymes, or fragments thereof, recombinant vectors comprising such nucleic acids, and host cells containing the recombinant vectors. The invention is further directed to expression of such nucleic acids to produce recombinant vespid venom enzymes, or recombinant fragments, derivatives or analogs thereof. Such recombinant products are useful for diagnosis of allergy and for therapeutic treatment of allergy. In specific embodiments, the present invention provides nucleic acids encoding, and complete nucleotide and amino acids sequences for, vespid venom phospholipase, for example, Polistes annularis phospholipase A.sub.1, and vespid venom hyaluronidase, for example, Polistes annularis hyaluronidase. Moreover, agents and pharmaceutical compositions are disclosed which modulate the immune system's ability to attack an immunogen, along with methods of using such agents and pharmaceutical compositions to modulate immune response, or to treat immune system related diseases or disorders, or symptoms related thereto.

TITLE: Albumin-solubilized hymenoptera venoms for vaccine use

DATE-ISSUED: September 25, 1984

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Patterson; Roy	Wilmette	IL		

US-CL-CURRENT: 530/363; 424/184.1, 424/193.1, 424/194.1, 424/275.1, 530/403,  
530/858

ABSTRACT:

Hymenoptera venoms for vaccine immunization of human subjects are prepared by copolymerizing the venom with albumin using glutaraldehyde as the polymerizing reagent. Sufficient albumin is used to produce water-soluble copolymers of high molecular weight. The resulting water-soluble copolymers of molecular weights above 200,000 daltons are separated from the residual reagents, insolubles, and lower molecular weight polymers or copolymers.
